

Q-1- Draw a well labelled diagram explaining divergent and convergent thinking.

DIVERGENT THINKING

CONVERGENT THINKING

Narrow down ideas

1) Divergent Thinking is a process of generating multiple ideas or solutions for a given problem. It focuses on exploring many possible directions and encourages, creativity, imagination and open-mindedness.

• Characteristics:

- open-ended and flexible.
- focuses on quantity and variety of ideas.
- Encourages imagination and innovation.
- Common in brainstorming and creative tasks.

• Examples:

Thinking of all possible uses of a paper clip — as a hook, earring, key holder, tool or decoration.

2) Convergent thinking involves narrowing down multiple ideas to find one best possible solution.

It is logical, analytical, and focuses on accuracy and correctness.

• Characteristics:

- Logical and systematic.
- focuses on finding one correct answer.

- Involves critical and evaluation thinking.
- Common in exams, problem-solving, and decision-making.

Examples :-

Solving a mathematics problem or finding the correct answer in a multiple-choice question.

Q-2- Frame one How might we (HMW) question for healthcare and education sector each.

1) Health Care -

How might we design a system that provides affordable, accessible, and timely healthcare service to people living in rural and remote areas?

• Explanation:-

Healthcare is one of the most essential needs of society. Yet millions of people, especially in rural regions, face difficulties in accessing proper medical care due to a lack of hospitals, doctors, and modern facilities. This How might we question encourages the exploration of innovative solutions such as mobile health units, telemedicine, digital health platforms, and community health programs. The aim is to bridge the gap between urban and rural healthcare systems, ensuring that every individual has the right to quality medical treatment regardless of their location or income.

2) Education Sector:-

How might we create an engaging and inclusive learning environment that uses technology to improve the quality of education for all students?

• Explanations:-

Education today faces challenges such as lack of motivation among students, unequal access to resources, and outdated teaching methods. This How might we question focuses on how technology and innovative teaching methods can transform the learning experiences. By integrating tools like digital classrooms, interactive content,

Online platforms, and personalized learning, education can become more engaging, accessible and effective for students from diverse backgrounds. It also promotes creativity, collaboration and continuous learning in the education systems.

- Conclusion:

Framing how might we questions helps in identifying opportunities for innovation and problem-solving. In both the healthcare and education sectors, these questions guide the process of developing human-centered solutions that can bring meaningful change to society.
